GRIP-LOK® BD Arterial Cannula with FLOSWITCH® Securement

The Grip-Lok® for BD Arterial Cannula with FloSwitch® is a stabilization device that secures the arterial cannula in a channel that is die-cut to the shape of the suture wings.

This new design uses the same easy to use Grip-Lok hook and loop over-strap while allowing easy access to the FloSwitch.

The BD Arterial Cannula with FloSwitch® is popular in Europe and is not available in the North America.

All Grip-Lok® products are designed to provide compliance with the preferred use of a manufactured catheter stabilization devices as stated in the 2006 Infusion Nursing Standards of Practice.

Proper catheter stabilization can reduce non-reimbursable hospital acquired conditions (HACs), catheter-related bloodstream infections (CR-BSIs), and incidence of needle stick injury.

Features:

- Soft and flexible fabric design is less prone to catching and improves patient comfort
- Provides superior securement for both horizontal and vertical lifting accidental pulls
- Easy access to the FloSwitch
- Simple to apply, inspect and adjust
- Hypoallergenic, breathable and latex-free to reduce the risk of allergic reactions and skin irritation
- Low profile with no pins or hard plastic parts.

Application of GRIP-LOK® BD Arterial Cannula with FLOSWITCH®

Prepare the skin according to the standard hospital protocol for dressing application. Skin prep or hair removal may be required on some patients for better adhesion. Skin must be CLEAN and DRY prior to Grip-Lok® application.

1. Open the fabric over-strap, remove the interior liner and hold the strap open.

2. Slide the Grip-Lok® under the arterial cannula and adhere in the exposed adhesive cut-out space provided.

3. Hold the Grip-Lok® in position while removing the paper backing from one side, then the other, to secure on the skin surface.

4. Secure the fabric over-strap over the arterial cannula with the Floswitch® portion coming through the center cut-out.
