Sergeant
Peripheral support catheter

Description
Sergeant is a peripheral support catheter, designed to lead complex lesions procedures. It is intended to provide physicians with the needed support to cross all lesions. “Sergeant’s” outstanding guidewire support is possible thanks to its braided catheter that allows exceptional pushability and torque capacity, and its tapered shaft that increases support.

Indications
Sergeant is intended to facilitate, guide and support a guidewire while accessing into the peripheral vasculature. It allows guidewire exchanges, and provides a conduit for the delivery of saline solutions and/or diagnostic contrast agents. Sergeant is indicated for patients with peripheral artery disease in small vessels or challenging anatomy during diagnostic and interventional procedures.

Perfect visibility
The 4 radiopaque markers assess accurately:
• Catheter position
• Lesion length

Able to go through tortuous anatomy
HYDRAX +, proprietary hydrophilic coating that increases the catheter trackability

Support to cross all lesions
Developed to ensure an outstanding guidewire support:
• Braided catheter with exceptional pushability and torque capacity
• Tapered shaft design to increase support
Sergeant
Peripheral support catheter

- Over-the-wire catheter (OTW)
- 4 tungsten radiopaque markers
- 4F introducer compatible
- Tip: Straight or 30º Angled
- 0.014", 0.018" and 0.035" guidewire compatibilities
